PROFESSIONAL SUMMARY

Data Analyst with an accounting degree from Alexandria University and hands-on training in Python, SQL Server, Power BI, and Tableau through the Digital Egypt Pioneers Initiative (DEPI), Round 5. Built three end-to-end data analysis projects: a Python retail analytics pipeline, a SQL Server data warehouse with ETL, and linked Tableau dashboards. Combines accounting and financial reporting fundamentals with data cleaning, data visualization, and KPI reporting skills. English: C1.

TECHNICAL SKILLS

Data Analysis: Python, Pandas, SciPy, Exploratory Data Analysis (EDA), Statistical Analysis, Data Cleaning, Feature Engineering, Data Analysis, Object-Oriented Programming

Data Visualization & BI: Microsoft Power BI (Power Query, DAX, Data Modeling), Tableau, Matplotlib, Seaborn, Dashboard Design, Data Storytelling, Key Performance Indicator (KPI) Reporting

Databases & Data Engineering: SQL, SQL Server, T-SQL, Joins, Common Table Expressions (CTEs), Stored Procedures, Views, Data Warehousing, Extract, Transform, Load (ETL), Star Schema, Medallion Architecture, Database Design

Tools: Microsoft Excel, Microsoft 365, Google Sheets, Git, GitHub, Jupyter Notebook

Business & AI: Accounting, Financial Reporting, Data Governance, Generative AI, Large Language Models (LLMs), Prompt Engineering

WORK EXPERIENCE

Data Analyst Trainee
Digital Egypt Pioneers Initiative (DEPI), Round 5, Ministry of Communications and Information Technology (MCIT)
Alexandria, Egypt (Hybrid) | Jul 2026 - Present

- Selected for a national scholarship and professional training track in data analytics.
- Apply Python (Pandas) for data cleaning, exploratory data analysis (EDA), and object-oriented programming.
- Write SQL using joins, common table expressions (CTEs), stored procedures, views, and database design.
- Build interactive dashboards in Tableau and Power BI using Power Query, data modeling, and DAX.
- Deliver six graded mini-projects across Python, SQL, Tableau, and Power BI, followed by an end-to-end capstone project with an executive presentation.

Internship Trainee
Commercial International Bank (CIB), Summer Internship Program
Alexandria, Egypt (Remote) | Sep 2024 - Nov 2024

- Completed a five-module banking internship: banking operations, ESG, financial literacy, entrepreneurship, and digital transformation.
- Practiced professional communication and active listening in data-driven business contexts.

PROJECTS

Superstore Sales & Customer Dashboards | Tableau, SQL Server | 2026
DEPI Mini Project 3, team of 6 | github.com/bshni/tableau_superstore_sales_customer_dashboards

- Built two linked Tableau dashboards on a SQL Server gold layer: sales, profit, and quantity KPIs with Jan-Dec trends and year-over-year % difference, plus customer counts, sales per customer, and top 10 customers by profit.
- Designed KPIs that update dynamically with Category and Sub-Category filters, using a consistent color scheme (teal favorable, orange unfavorable).
- Corrected inflated order counts caused by a missing Order ID by sourcing it from the silver layer and counting distinct orders; results reconcile to 325 customers in the 2016 view.

SQL Data Warehouse & Business Analytics | SQL Server, T-SQL, Python | 2026
DEPI Mini Project 2 | github.com/bshni/sql_data_warehouse_business_analytics

- Built a retail data warehouse from a single flat file using Medallion architecture (Bronze, Silver, Gold) and a star schema with three dimensions and one fact table.
- Automated ETL with a Python Excel-to-CSV script, BULK INSERT, and truncate-and-reload stored procedures; added data quality checks per layer and a gold-layer data catalog.
- Wrote SQL analysis scripts (change over time, cumulative, performance, part-to-whole) and customer and product KPI report views covering recency, average order value, segmentation, and customer lifespan.

Superstore Retail Analytics | Python, Pandas, SciPy | 2026
DEPI Mini Project 1 | github.com/bshni/Mini-Project-001-Superstore-retail-analytics-project

- Built an end-to-end Python pipeline on 9,994 retail orders ($2.29M sales, $284K profit, 12.4% margin) to identify profitability, shipping, and sales drivers.
- Developed reusable object-oriented data cleaning and feature engineering classes with custom exception handling, IQR outlier detection, and fields such as Profit Margin and Discount Bucket.
- Found a significant negative correlation between discount and profit (r = -0.22) and traced most losses to Tables, Bookcases, and Supplies, supporting a pricing recommendation.
- Delivered 11 Matplotlib and Seaborn data visualizations, a dashboard, and an automated KPI report.

EDUCATION

Bachelor's Degree in Accounting, Alexandria University, Faculty of Commerce
Alexandria, Egypt | 2022 - 2026 | GPA 3.409 (A-)

CERTIFICATIONS

- IBM Data Fundamentals, IBM SkillsBuild | Aug 2026
- Associate Data Engineer in SQL, DataCamp | Jan 2026
- AI Fundamentals Certificate, DataCamp | Dec 2025
- Data Literacy Certificate, DataCamp | Aug 2025
- McKinsey Forward Program, McKinsey & Company | Dec 2024
